Determination of the presence of blocking autoantibodies to FRs in serum

KEY	
	folic acid (FA) coupled to X where X can be either a: enzyme b: radioactive label c: fluorescent marker d: biotin
	autoantibody to FR present in serum
	apo GPI-FR
	FR without GPI anchor
	matrix with apo FRs covalently coupled
	membrane with apo GPI-FRs
	matrix with apo GPI-FRs coupled via a hydrocarbon chain or hydrophobic moiety or lipophilic moiety

Incubate overnight at 4°C with
serum that has been charcoal treated to remove
endogenous FA

Incubate with  for 30 min at 4°C

(FRs whose FA binding sites are not blocked by the autoantibody will bind to the )

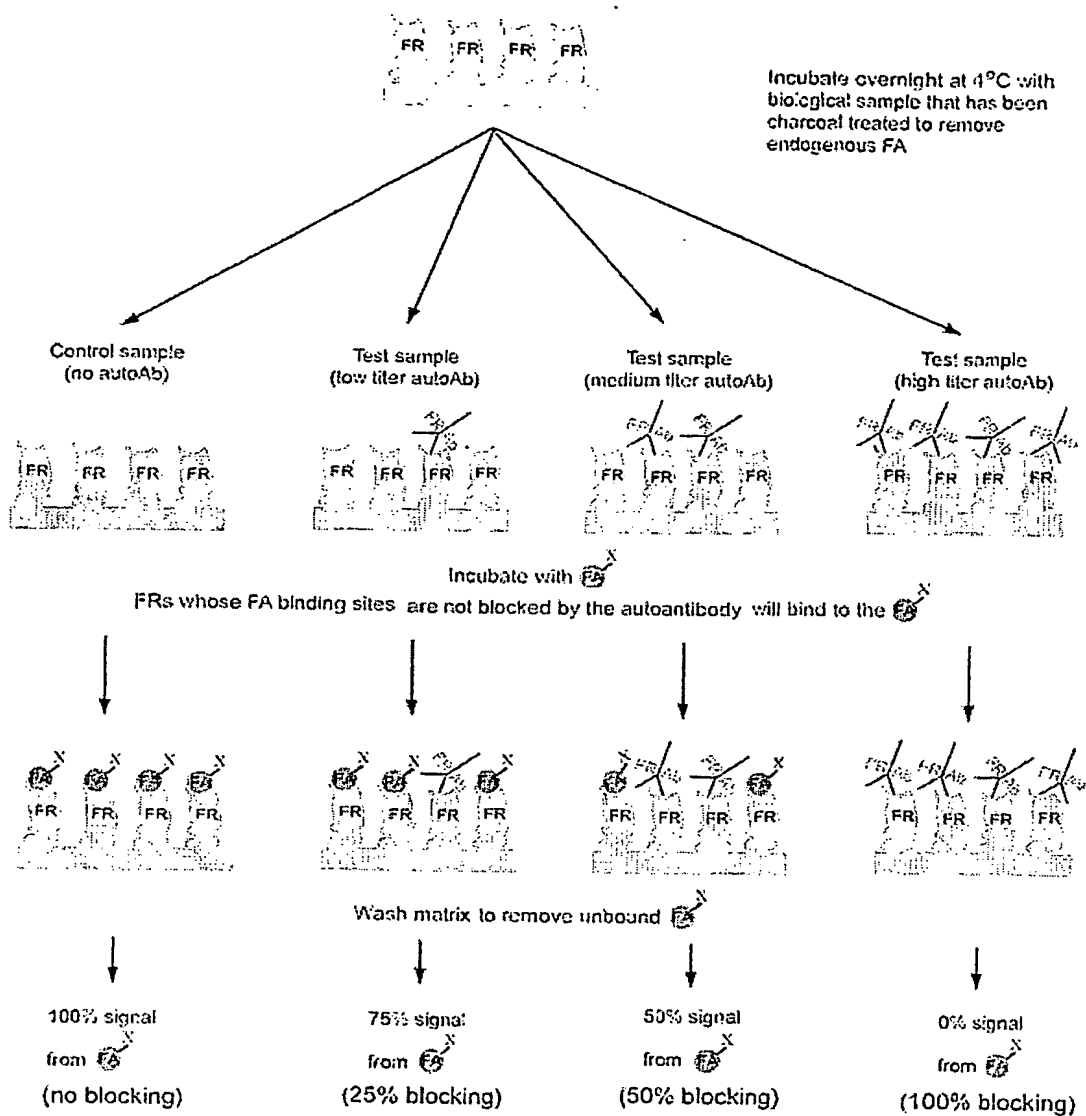

Wash matrix/membranes to remove unbound 

Detect bound  either by counting radioactivity, or by incubating with an
avidin-enzyme complex followed by an appropriate substrate
resulting in a color reaction, or by direct color substrate reaction,
or by detecting immunofluorescence.

The reduction in bound  obtained when compared to the control
incubation conducted in the absence of serum containing
autoantibodies to FRs identifies the presence of and gives the titer
of the blocking autoantibody to the FRs.

BEST AVAILABLE IMAGES

Defective images within this document are accurate representations of the original documents submitted by the applicant.

Defects in the images include but are not limited to the items checked:

- ☐ **BLACK BORDERS**
- ☐ **IMAGE CUT OFF AT TOP, BOTTOM OR SIDES**
- ☒ **FADED TEXT OR DRAWING**
- ☒ **BLURRED OR ILLEGIBLE TEXT OR DRAWING**
- ☐ **SKEWED/SLANTED IMAGES**
- ☐ **COLOR OR BLACK AND WHITE PHOTOGRAPHS**
- ☐ **GRAY SCALE DOCUMENTS**
- ☐ **LINES OR MARKS ON ORIGINAL DOCUMENT**
- ☐ **REFERENCE(S) OR EXHIBIT(S) SUBMITTED ARE POOR QUALITY**
- ☐ **OTHER:** _____

IMAGES ARE BEST AVAILABLE COPY.

As rescanning these documents will not correct the image problems checked, please do not report these problems to the IFW Image Problem Mailbox.
